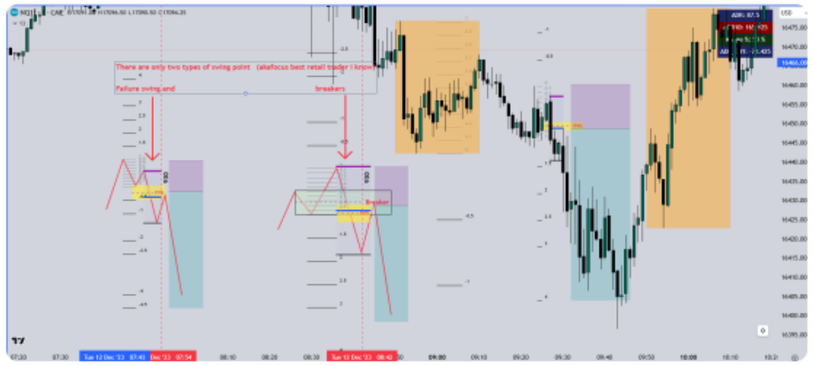
Model 9:30

The Purpose of this strategy is to find the pre-market judas

Overview 9:30 Model

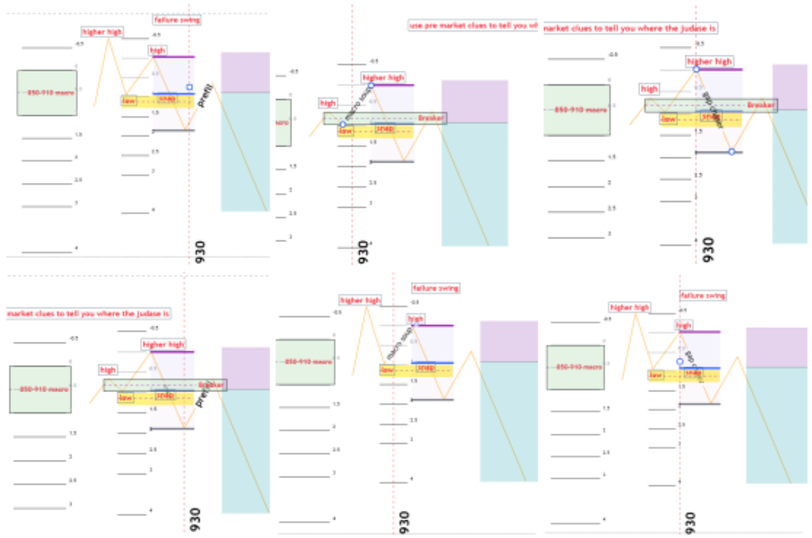
Step 1 there are only two types of swing points



Breaker delivery sequence or failed swing delivery sequence

Step 2 on the 1 min chart which one did 925 to 930 support

Step 3 on the 1 min chart are we in the manipulate leg(macro soup), the displacement snap(gap chaser), or the return to fair value Not fvg(prefill)



Once you id it draw the fib on the manipulate leg to find your target and fib the manipulate leg to the snap for a return to value. Utilizing the stop level around the structure points indicated and find the most range between 930 and 959 either 3 r or 3 SD etc

Hopefully this helps clarify all the confusing out there I can't break it down simpler then this

Read each picture carefully

930 candle tells you where you are

There are nuances that will predict this happening but I just want you to get the basic first I believe in all of you

Narrative

1. 8:50 - 9:10 macro act as original consolidation

Meaning of this: use this macro as liquidity, it can be as draw on liquidity or reversal point.

2. Use the time clusters and the 55:30 opening range as a net to capture the judas

Meaning of this: Self explanatory in sentence.

3. Use the range between 9:20 to 9:29 to know if the judas will be delivered between 9:25-9:29 or at 9:30

Meaning of this: There are certain things in this range that can give us a small idea of how the 9:30 open (Judas or expansion) will behave.

- We are trying to identify where we are in the breaker deliver sequence or the failure swing sequence. 09:30 will be one of the three models we use (explained on next slides)

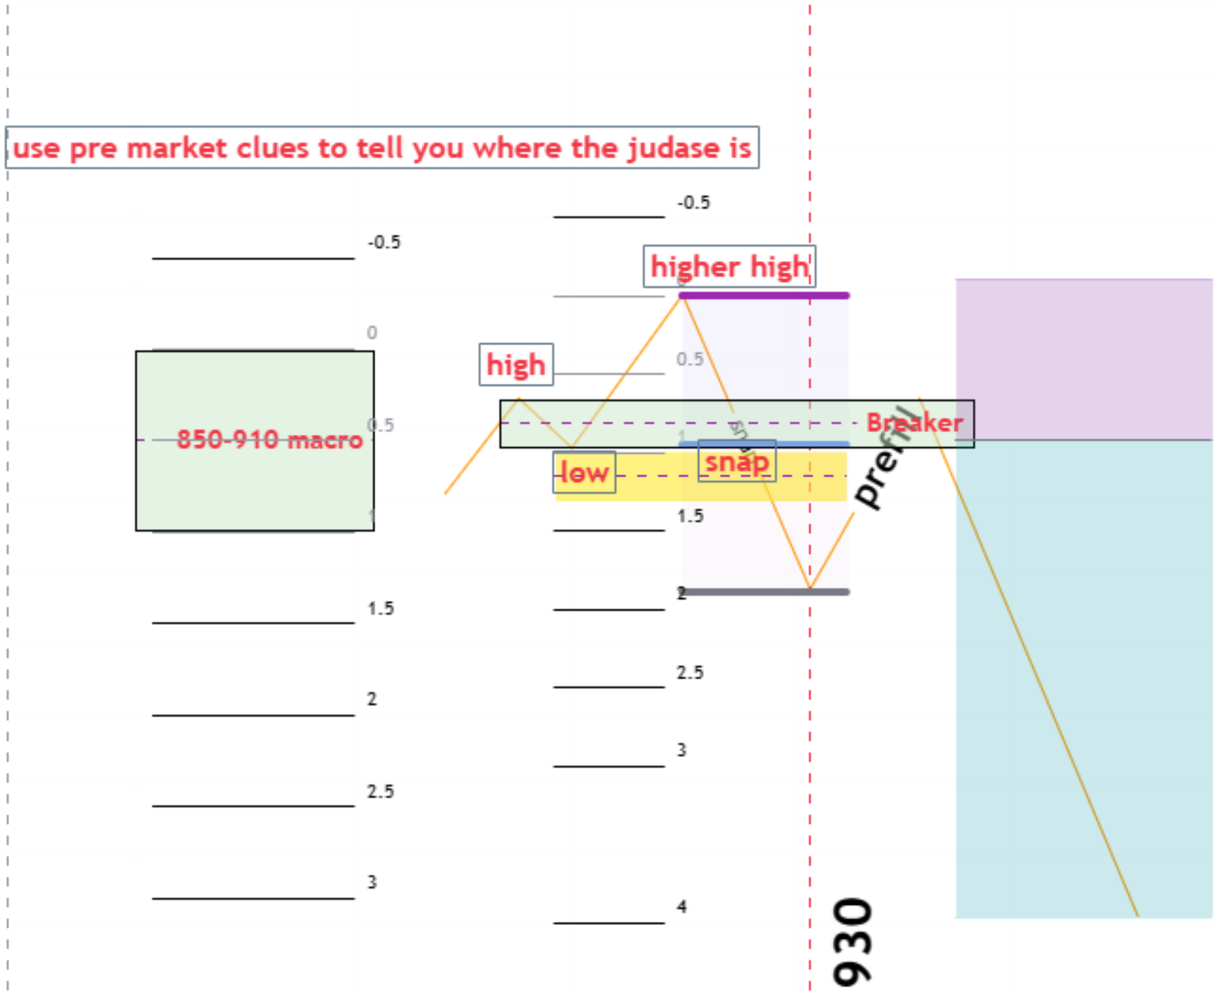
4. Use the 9:28 as the directional candle for 9:30 to 9:59

Meaning of this: 928 and 932 are buddies they are confirmation of trend If they kiss or if the 932 is on top of 928 it adds probably to the direction when the 932 swallow the 928 candle you know the direction is shit or judas is still forming.

Entry Models

Breaker Sequence + Pre-Fill

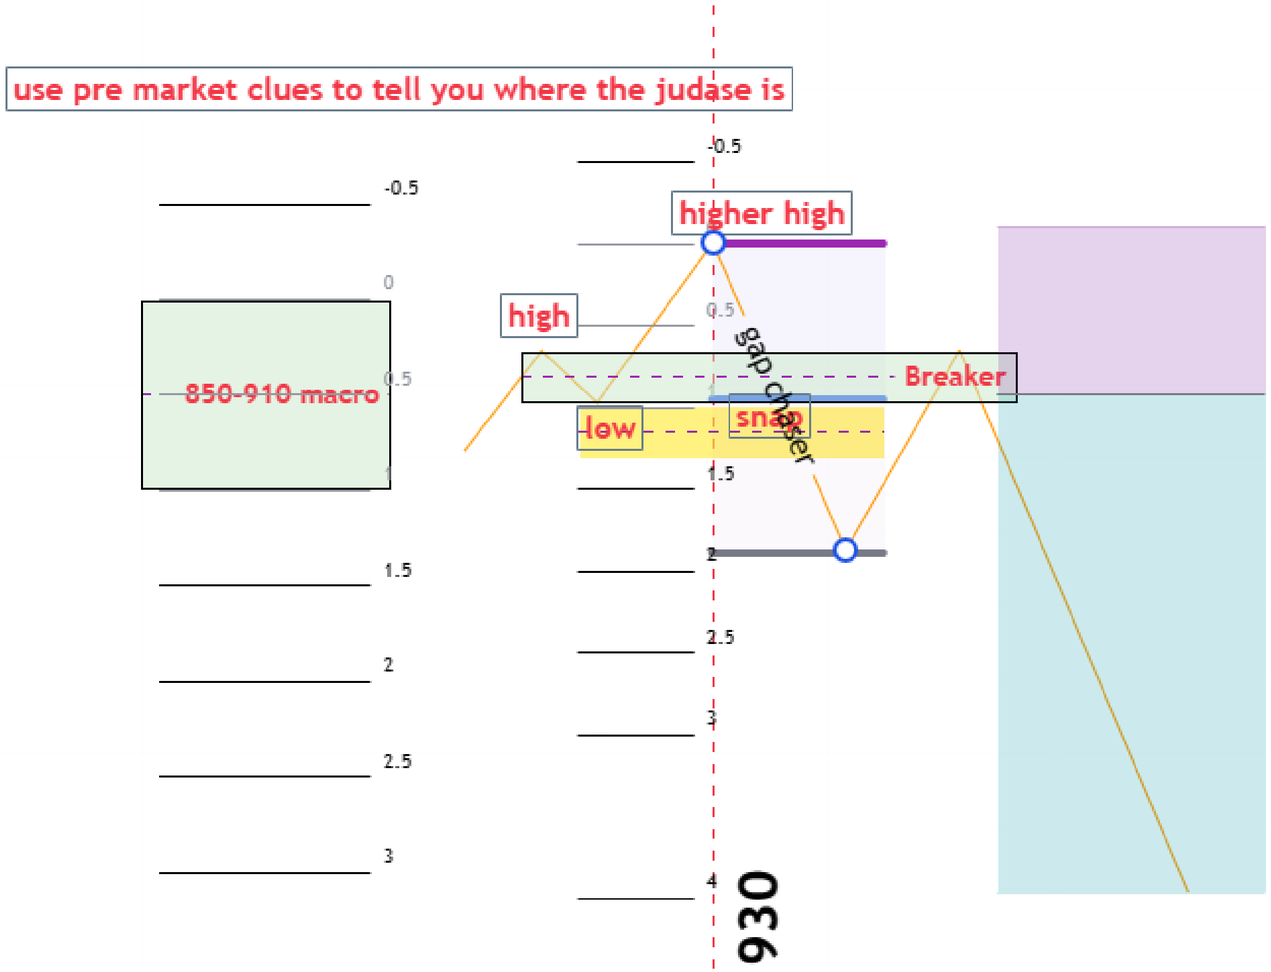
When at 9:30 we have this type of sequence and we had a recent snap where we left some inefficiencies behind in the SNAP leg then we can go ahead with a pre-fill model and believe that judas was already created during 9:20 - 9:29 .



Entry Models

Breaker Sequence + Gap Chaser

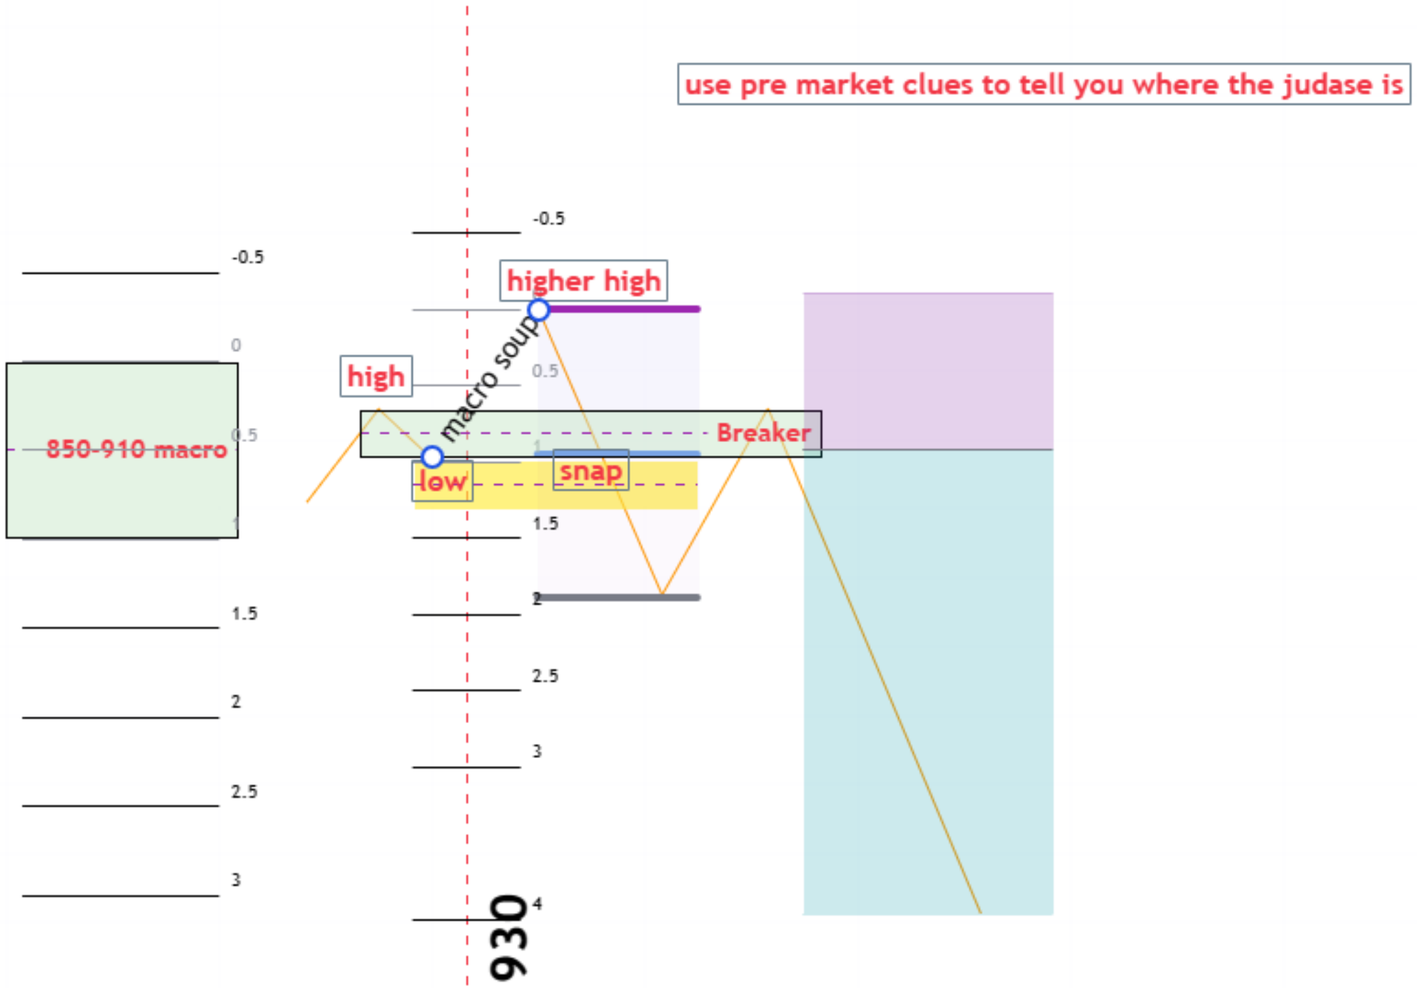
When at 9:30 we have an aggressive snap after having created an HH then we can anticipate that a breaker sequence is being created and anticipate that the judas has been created and we will have a gap-chaser.



Entry Models

Breaker Sequence + Macro Soup

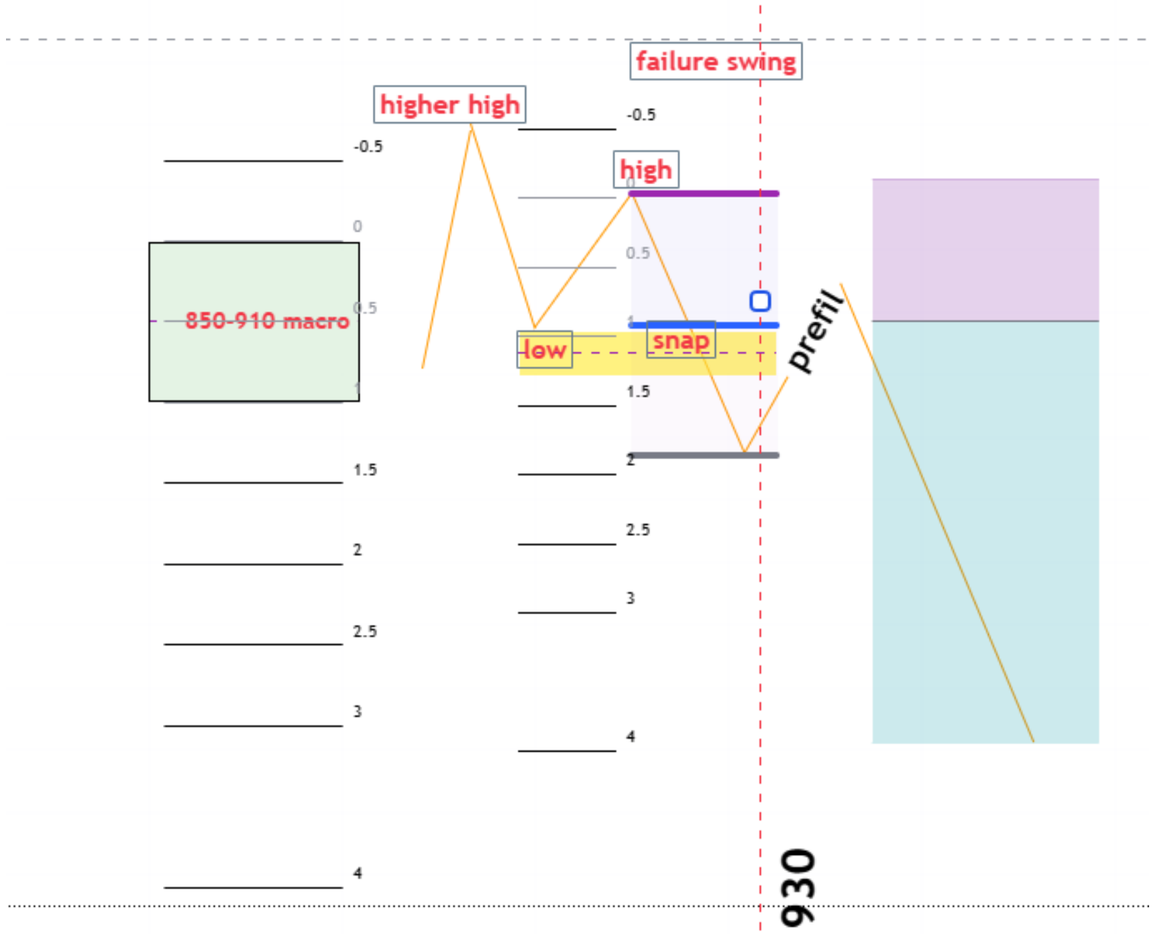
When during 9:20 - 9:29 we don't have great price action (consolidation) then we can anticipate a judas at 9:30, then if 9:30 we see a violent movement until one of the macro high/low (8:50 - 9: 10) we can anticipate a macro soup.



Entry Models

Failure Swing Sequence + Pre-Fill

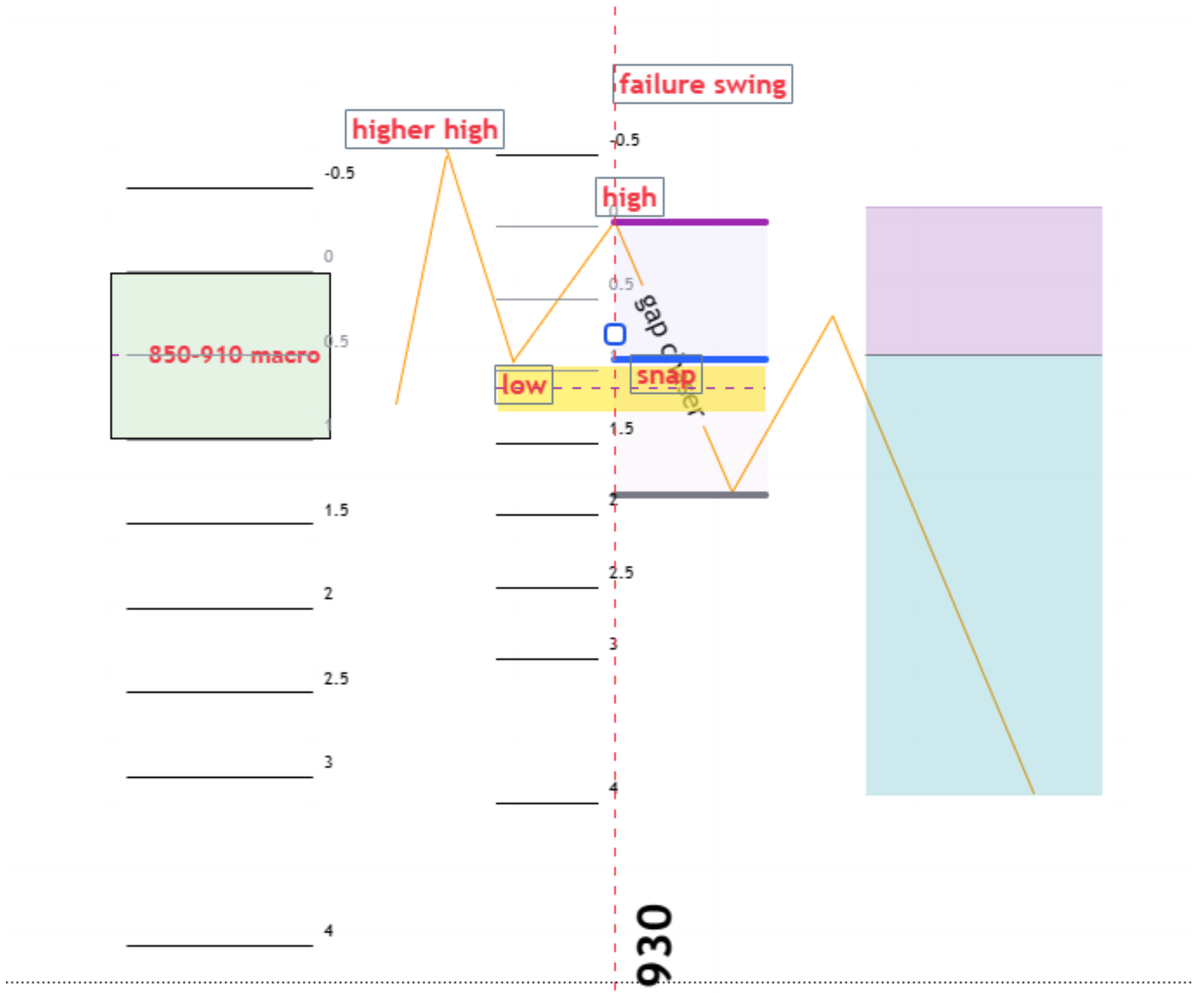
When at 9:30 we have this type of sequence and we had a recent snap where we left some inefficiencies behind in the SNAP leg then we can go ahead with a pre-fill model and believe that judas was already created.



Entry Models

Failure Swing Sequence + Gap Chaser

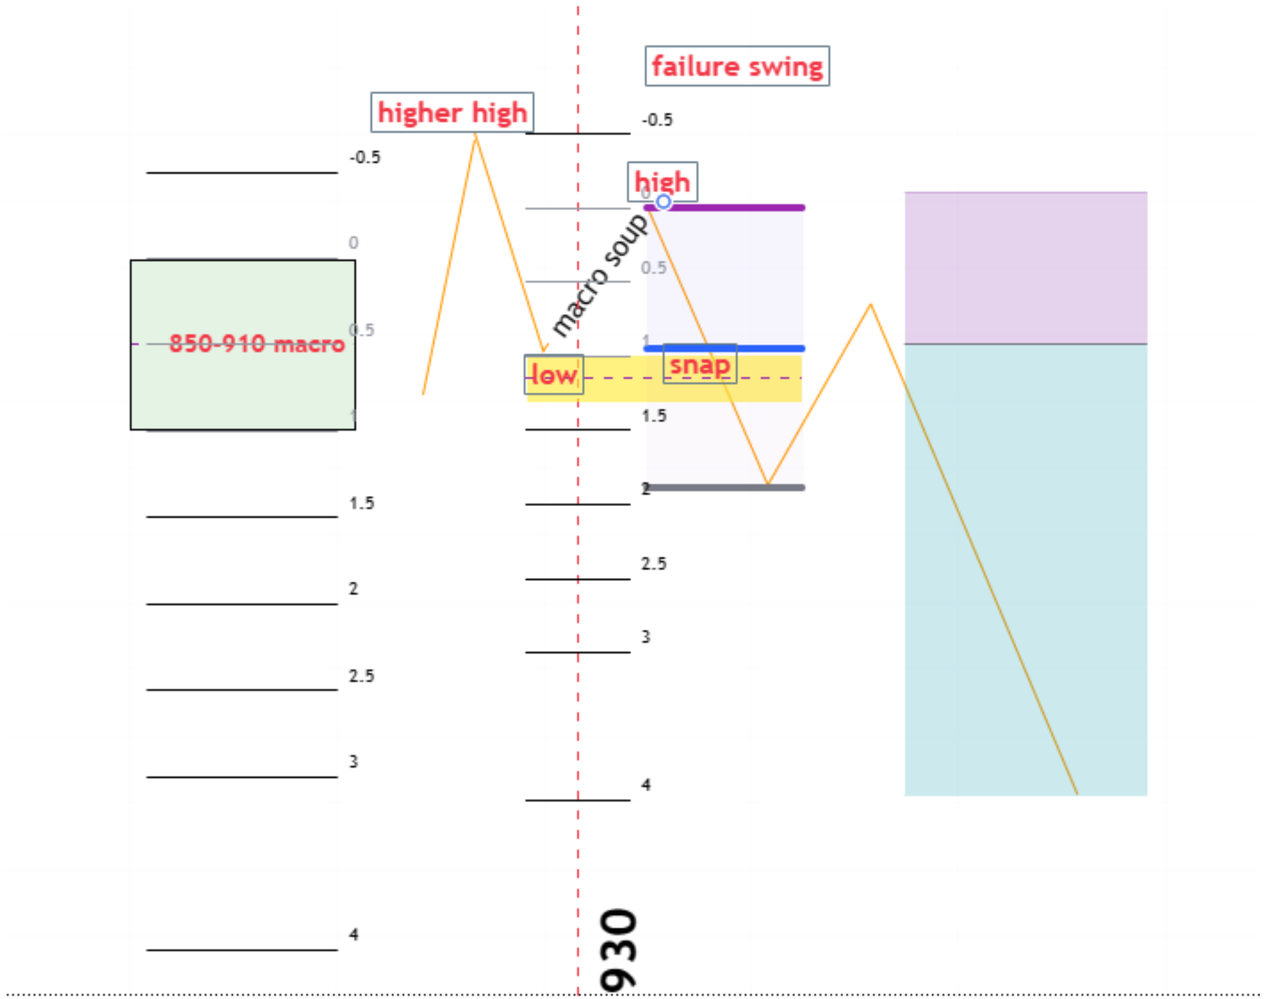
When at 9:30 we have an aggressive snap then we can anticipate that a failure swing sequence is being created and anticipate that the judas has been created and we will have a gap-chaser.



Entry Models

Failure Swing Sequence + Macro Soup

NEED YOUR HELP HERE AHAH



Some examples (more to come)

Some examples (more to come)

Narrative:

1. In this case we use 8:50 - 9:10 macro was used as a draw on liquidity.

2. One side of the original consolidation was raided and during 9:20 - 9:29 price went up to a time cluster (6:30) and have a good rejection, with this we can antecipate that most likely judas as already been created and at 9:30 it will be a expansion.

3. With that in mind, we wait for signs of change in state of delivery: 9:28 candle being broke and snap in market structure.

4. In this case the entry model was Gap Chaser.
