IV. Tactical Analysis & Hour-Specific Findings

A. Trend Persistence Leaderboard

Best hours for continuation plays (Breaking the bias-side level):

1. **09:00** (82.1%)
2. **03:00** (76.7%)
3. **08:00** (74.4%)

B. The 09:00 Volatility Trap

The 09:00 hour has a unique characteristic: **Double Break Probability is 39.2%**.

Even if you open above the midpoint, there is a massive chance (>40%) that specific hour will break BOTH the Previous High AND Previous Low.

Tactical Implication: Prev Hour Mid is a weak filter for 09:00. Expect expansion.

C. 10:00 AM Reversal Risk

10:00 AM shows a higher Reversal Probability (**25.6%**) compared to adjacent hours.

Opening above the 09:00 mid does NOT guarantee a breakout. 10am often sets a trap High and reverses.
