

NQ1 Overnight Classification Probability Matrix

This document analyzes the correlation between overnight session outcomes and the final Daily Classification (R1, R2, DWP, DNP).

Methodology

- **Data Source:** 5001 trading sessions of NQ1 history.
- **Grouping:** Sessions grouped into **Bullish**, **Bearish**, and **Contradicting** based on Asia/London alignment.
- **Asia Broken in London:** Logic specifically checks if the **Asia Session Mid-Point** was broken *during* the **London Session** timeframe (02:30  03:30 ET).

1. Aggregate Scenario Analysis

Do 'Bullish' overnight sessions actually lead to Bullish RTH days?

Scenario	n	Most Likely	R1%	R2%	DWP%	DNP%
Bullish	1257	DWP	19.9	31.6	31.8	16.7
Bearish	1051	R2	20.7	35.0	30.4	13.8
Contradicting	2414	R2	19.6	34.6	29.7	16.1
Neutral/Other	279	DWP	17.6	29.4	32.3	20.8

2. Trend Day Analysis (DWP + DNP)

Which specific setups have the highest probability of a generic 'Trend Day' (Either DWP or DNP)?

Setup (Asia London Broken)	Trend% (DWP+DNP)	DWP%	DNP%	n
none long false Brk:True	72.2%	50.0%	22.2%	18
short true none Brk:True	64.3%	14.3%	50.0%	14

Setup (Asia London Broken)	Trend% (DWP+DNP)	DWP%	DNP%	n
none short true Brk:False	64.0%	36.0%	28.0%	25
none short true Brk:True	62.2%	51.4%	10.8%	37
none long true Brk:False	60.0%	43.3%	16.7%	30
none long true Brk:True	57.1%	20.0%	37.1%	35
none short false Brk:True	56.3%	37.5%	18.8%	16
none short false Brk:False	54.6%	45.5%	9.1%	11
long true none Brk:False	54.6%	27.3%	27.3%	22
long true long true Brk:False	53.5%	34.7%	18.8%	398

[!TIP]

Trend Insight: failed breakouts (Broken:True) often convert into DWP Trend Days as the market retraces deep but holds the trend direction.
